End of Season 2019/20

The Committee have agreed that the 2019/20 season will be regarded as completed from this date.

To calculate final League positions we will use a percentage points basis. This is calculated on total points won (3 for a win, 1 for a draw), minus any points deducted for disciplinary offences, then divided by the total number of points available from the games played, multiplied by 100 to give the percentage. Should teams have the same percentage points goal difference will then be used.

Resulting percentage values are displayed on this website - and though the tables are still shown in 'points' order, a couple of positional changes will be made when the tables are archived. There are no teams where this small difference affects promotion or relegation.

Using this basis takes into consideration that at the point we have closed the season not all teams will have completed the same number of games and this method gives fairness to all teams.

Final promotion and relegation issues have yet to be finalised - and will be posted in due course.

Club secretaries are in receipt of these details.
